VoyAlge

Personalized, Fast, and Delightful Travel Planning

The Opportunity

Gen Z travel is booming.

- $40B annual projected spend by 2030
- Gen Z travelers: 200M+ globally, highly social and experience-driven
- Today: They spend 10–20 hours planning a short trip, bouncing between TikTok, blogs, and spreadsheets

Opportunity: Capture Gen Z's loyalty by making trip planning instant, fun, and personalized.

The Problem

- Too much content → decision fatigue
- Budget management → poor visibility, overspending risks
- Lack of authenticity → itineraries feel touristy, not unique
- No sustainability focus → doesn't align with Gen Z values

Our Solution

VoAIger: Generative AI for Itineraries Planning

- 3-day personalized itineraries in <5s
- Tailored to adventure, local culture, and sustainability
- Budget-aware planning built in
- Delightful, social-ready experience

Goals & Metrics

Business Goal: Increase Gen Z travel engagement and retention with AI-driven personalization.

01. SxS Win Rate: ⩾70% vs baseline itineraries

02. Hallucination Rate: <2%

03. Latency: <5s first token response

04. Retention: ⩾40% of users return within 3 months

Responsible AI

We're building responsibly from Day 1.
Safety Guardrails: Block unsafe or harmful recommendations
Ethical Data Use: Curated, clean, diverse datasets → reduced bias
Transparency: Feedback loop (thumbs up/down) to continuously improve
User Trust: Explicit disclaimers for travel safety (e.g., "always verify local guidelines")

User Experience

A Delightful Journey for Gen Z Travelers

Flow:

1. Input prompt or destination, dates, budget
2. AI instantly generates itinerary
3. See day-by-day cards + budget tracker + map
4. Quick “tweaks” (cheaper, more nightlife, eco-focus)
5. Share with friends in one click

Differentiation

Why Travel Copilot wins vs existing tools:

- Speed: Instant itineraries (<5s vs hours of research)
- Tone: Gen Z-friendly (emoji, fun copy) vs generic apps
- Personalization: Adventure/culture/sustainability filters
- Delight: Hidden gems + social share features

Implementation Plan

MVP in ~20 weeks

- Weeks 0–4: Dataset + tokenizer setup
- Weeks 4–8: Fine-tune AI model (LoRA)
- Weeks 8–12: UX prototype (cards, maps, budget tracker)
- Weeks 12–16: Feedback loop integration
- Weeks 16–20: Beta launch → Public release

Risks & Mitigation

- Latency risk → caching + optimization
- Data quality risk → curated + filtered POI datasets
- Competition risk → differentiation via budget + Gen Z voice
- Adoption risk → strong social sharing integration

Thank you very much!
